# How to setup Crestron Connected on FW-xxBZ35F BRAVIA Professional Displays

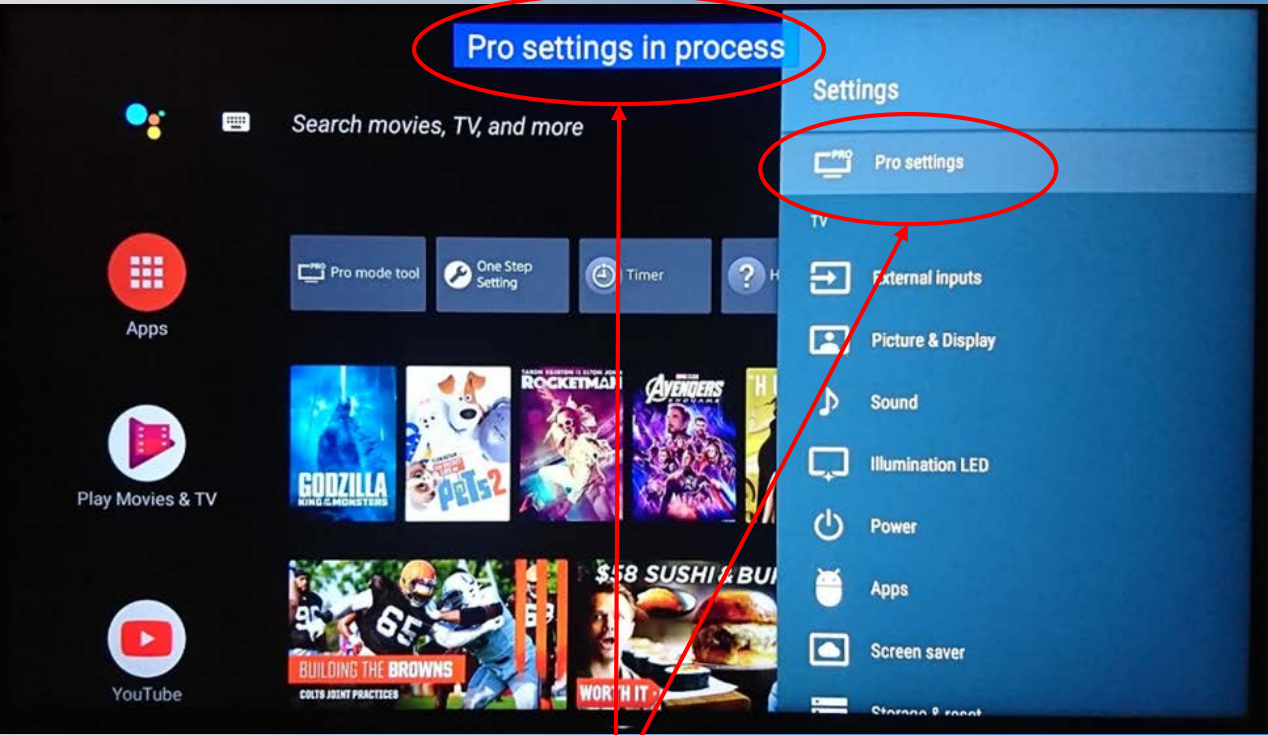

Crestron Connected certification was received for FW-xxBZ35F models in January 2019. The compatibility with Crestron Connected is introduced with the Android 8.0 software for FW-xxBZ35F. If the display is running Android 7.0, the Crestron Connected App for configuration is not available, and Crestron Connected Compatibility is not available. Please confirm the software version is PKG6.6520.0252BBA or later.
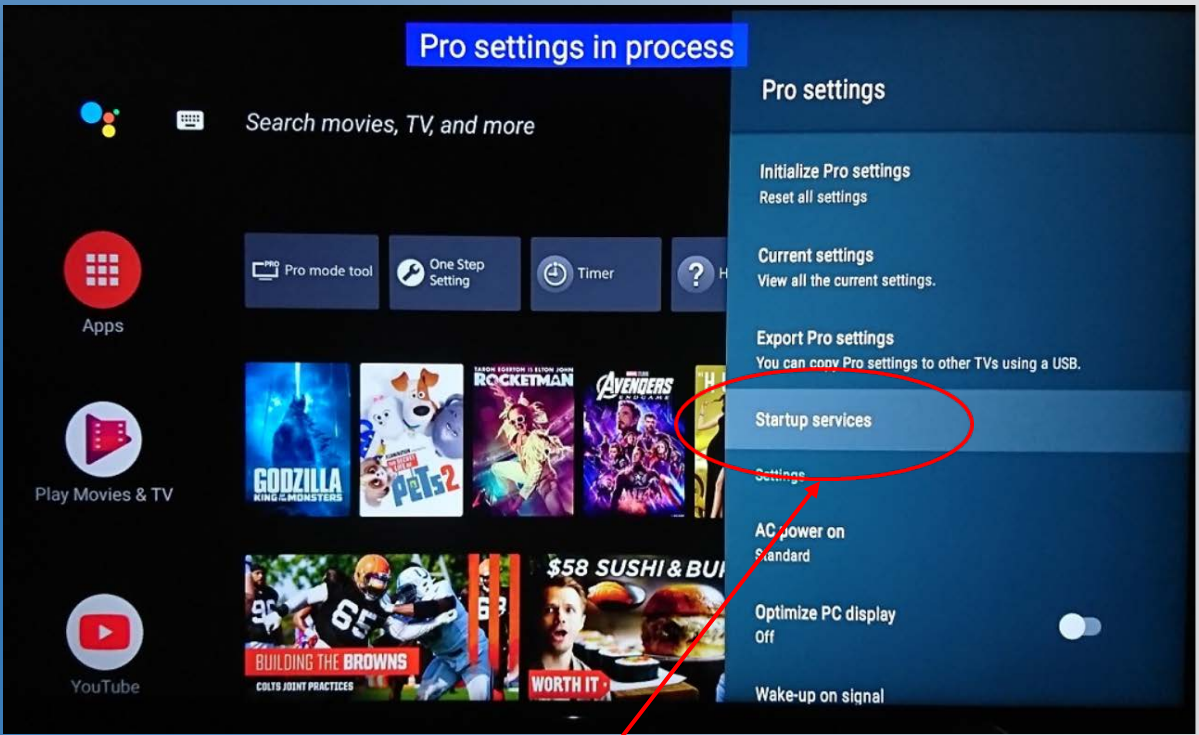

The Crestron Connected configuration and compatibility is implemented as an Application which is enabled in the Pro Settings mode. To enable and configure the display for Crestron Connected, use the Pro Mode Tool to enter the Pro Settings Menu.

This step is optional based on the integrator's or customer's requirements: By default, Apps are hidden from the Apps Menu when in Pro Mode. However, Apps can be enabled to be visible / available on the Apps Menu when in Pro Mode. If it is desired to run the display in Pro Mode, and you want the Crestron Connected App, or any other App, such as the Pro Mode Tool, to be visible / available, then they should be enabled in the Pro Settings Menu.

Enable to be visible / available on the Apps Menu when in Pro Mode. Especially considering the Pro Mode Tool application. If this is hidden from the Apps menu when running Pro Mode, then only the IR remote key sequence of: Display ("I" symbol above Right arrow key), Mute, VolumeUp, Home will allow access back into the Pro Settings Menu.

The last step!

Determine if the display should be run in Pro Mode or Normal mode. Crestron Connected, once enabled, installed, and configured, is available in either Normal Mode or Pro Mode. From the Pro Settings Menu select either "Start Pro mode" or "Change to Normal mode."
